

Activity

Wiggly Water Shapes!

Instructions

- Gather a few different containers (cups, bowls, bottles—big and small!).
- Pour water into the first container and look at its shape.
- Now pour the same water into a different container.
- Watch closely—did the water change its shape?
- Try again with another container and see what happens!

Note to Parents

Take away Learnings

This simple activity helps children explore early science concepts by observing that water does not have a shape of its own—it changes to fit its container. It builds curiosity, observation skills, and introduces foundational ideas about liquids in a hands-on, playful way.
