

Activity

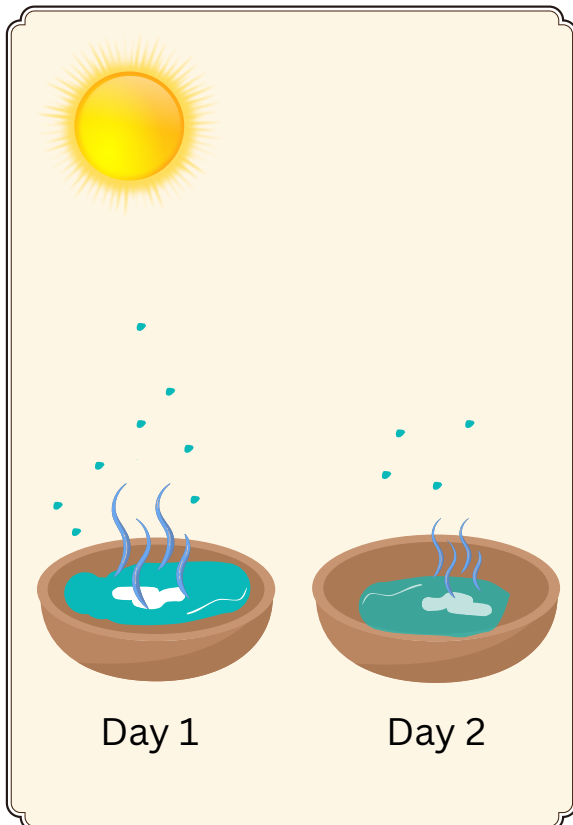

2

Magic Disappearing Water!

Instructions

- Pour some water into a shallow bowl or plate.
- Place it in a sunny spot where it won't be disturbed.
- Look at the water together and remember how much you see.
- Check back after a few hours or the next day.
- Surprise! Where did the water go?

Day 1

Day 2

Take away Learnings

This activity introduces children to the concept of evaporation in a simple, visual way. Children learn that water can change into an invisible gas when warmed by the sun. It encourages patience, observation over time, and early understanding of how nature and weather work.
