The Sweaty Glass Surprise!

Instructions

- Fill a glass with cold water and add a few ice cubes.
- Place the glass on a table and wait a little while.
- Look closely at the outside of the glass.
- Touch the tiny water drops—where did they come from?

Note to Parents

Take away Learnings

This activity introduces children to condensation by showing how water in the air can turn into liquid droplets when it touches something cold. It builds early understanding of weather and the water cycle while encouraging careful observation and curiosity.
